Providing TOTAL Water Management Solutions

Visit our website at www.aqua-aerobic.com to learn more about the Aqua-Aerobic® MBR Membrane Bioreactor System and our complete line of products and services:

Aeration & Mixing

Biological Processes

Filtration

Membrane Systems

Controls & Monitoring Systems

Aftermarket Products and Services
Process Control

System Features and Advantages

- Minimal pre-screening requirements
- Proven enhanced nutrient removal (ENR)
- Time-managed control offers operational flexibility with fewer tanks
- Separate nitrate recycle pumps are not needed

Typical Applications

- Municipal wastewater reclamation
- Impaired water bodies (TMDL limits)
- Groundwater re-injection

Aqua MixAir® System

The Aqua-Aerobic MBR system utilizes an Aqua MixAir system to provide biological treatment. The system can cyclically operate the aeration and mixing to promote anaerobic/anoxic and anaerobic environments with low energy consumption. An AquaDDM® direct-drive mixer is combined with an Aqua-Jet® surface aerator or Aqua-Aerobic diffused aeration. In addition, the Aqua MixAir system can achieve and recover alkalinity through denitrification, prevent nitrogen gas disruption in the surface aerator or Aqua-Aerobic diffused aeration. In addition, the Aqua MixAir system can achieve and recover alkalinity through denitrification, prevent nitrogen gas disruption in the

Installation Profile: Shepherdstown, WV

- 2.2 MGD Maximum Daily Flow
- Chose MBR system due to its low energy consumption and Aqua-Aerobic Systems’ superior service and experience
- Plant meets low nitrogen and phosphorus requirements for discharge into a sensitive waterway
- Excellent effluent quality: less than 3 mg/l total nitrogen, 0.1 mg/l total phosphorus, non-detectable TSS
- Easily adaptable to handle future flow expansion

*Effluent quality data is from March 2013

Submerged Membranes

Direct filtration of MLSS from the biological process is achieved with advanced submerged membrane technology. The membranes provide a 0.03 micron filtration barrier to bacteria and suspended solids for reuse quality effluent. Braided membrane fibers offer exceptional mechanical strength and side baffles accelerate cross flow within the modules.

The membranes are Title 22 approved and have proven to offer the lowest energy consumption among membranes in MBR applications.

BioAlert™ process notification provides corrective action to eliminate operational interruptions and upsets

• Assists in the optimization of enhanced nutrient removal
• Automatically regulates chemical addition to maximize nitrogen removal in the bioreactor and TSS/phosphorus reduction in the membranes.

Aqua-Aerobic® MBR Operation

The success of any membrane biological reactor (MBR) relies on three major components:

1) Biological Process
2) Membrane Filtration
3) Process Control

Screened influent enters the biological system and is treated via time-managed process control. The Aqua MixAir system conserves energy and assures a proper reactor environment. Efficient treatment can be performed in either a true-batch or a continuous-flow operational mode. Retrievable diffusers (shown above) are often used for easy access.

IntelliPro® Process Monitoring and Control System

The IntelliPro system is a personal computer (PC) based program that interfaces with the Aqua-Aerobic MBR system via a network connection to assist operators in optimizing the treatment process of the plant and further reducing operating costs.

System Advantages

- Real-time, online monitoring and control
- ‘Active Control Mode’ automatically receives, interprets and proactively adjusts in-basin instruments and process variables including biological nutrient removal, chemical addition and energy
- Reduces the operator’s sampling time
- Real-time and historical graphical trending of process parameters
- BioAlert™ process notification provides corrective action to eliminate operational interruptions and upsets
- Assists in the optimization of enhanced nutrient removal
- Automatically regulates chemical addition to maximize nitrogen removal in the bioreactor and TSS/phosphorus reduction in the membranes.
- Online operation and maintenance support
- On-demand remote troubleshooting assistance
Aqua-Aerobic® MBR

MEMBRANE BIOREACTOR SYSTEM

For nearly 40 years, Aqua-Aerobic Systems, Inc. has proven performance with solids/liquid separation technologies and in the past 28 years has installed over 1,000 biological treatment systems. The Aqua-Aerobic® MBR membrane bioreactor system is a unique, time-managed process which uses sequential aeration to promote biological nutrient removal in a simplified unit process. The integration of submerged membranes provides direct filtration of high-level mixed liquor suspended solids (MLSS). This unit process places the Aqua-Aerobic MBR system in a unique class of high-quality, membrane-coupled biological reactors.

System Features and Advantages

- Minimal pre-screening requirements
- Proven enhanced nutrient removal (ENR)
- Time-managed control offers operational flexibility with fewer tanks
- Separate nitrate recycle pumps are not needed

Typical Applications

- Municipal wastewater reclamation
- Impaired water bodies (TMDL limits)
- Groundwater re-injection

Aqua MixAir® System

The Aqua-Aerobic MBR system utilizes an Aqua MixAir system to provide biological treatment. The system can cyclically operate the aeration and mixing to promote anaerobic/anoxic and anaerobic environments with low energy consumption. An AquaDDM® direct-drive mixer is combined with an Aqua-Jet® surface aerator or Aqua-Aerobic diffused aeration. In addition, the Aqua MixAir system can achieve and recover alkalinity through denitrification, prevent nitrogen gas disruption in the settle phase, promote biological phosphorus removal, and control certain forms of filamentous bacteria.

Submerged Membranes

Direct filtration of MLSS from the biological process is achieved with advanced submerged membrane technology. The membranes provide a 0.013 micron filtration barrier to bacteria and suspended solids for reuse quality effluent. Braided membrane fibers offer exceptional mechanical strength and side baffles accelerate cross flow within the modules.

The membranes are Title 22 approved and have proven to offer the lowest energy consumption among membranes in MBR applications.

Aqua-Aerobic® MBR Operation
